Read the operator's manual carefully and make sure that you understand the instructions before you use the product.

1 Introduction

1.1 Introduction

Serial number:

PIN code:

Product registration key:

The serial number is on the product rating plate and on the product carton.

• Use the serial number to register your product on www.mcculloch.com.

1.1.1 Support

For support about the McCulloch product, speak to your servicing dealer.

1.1.2 Product description

Note: McCulloch regularly updates the appearance and function of the products. Refer to Support on page 3.

The product is a robotic lawn mower. The product has a battery power source and cuts the grass automatically. Collection of grass is not necessary.

The operator selects the operation settings with the keys on the keypad. The display shows the selected and possible operation settings, and the operation mode of the product.

The boundary wire and the guide wire controls the movement of the product within the work area.
1.2 Product overview

The numbers in the figure represent:

1. Body  
2. Hatch to display and keypad  
3. Stop button  
4. Rear wheel  
5. Front wheels  
6. Charging station  
7. Contact strips  
8. LED for operation check of the charging station, boundary wire and guide wire  
9. Cutting height adjustment  
10. Rating plate  
11. Display  
12. Keypad  
13. ON/OFF button  
14. Cutting system  
15. Blade disc  
16. Handle  
17. Chassis box with electronics, battery and motors  
18. Battery cover  
19. Power supply (the appearance of the power supply may differ depending on market)  
20. Stakes  
21. Measurement gauge for help when installing the boundary wire (the measurement gauge is broken loose from the box)  
22. Couplers for loop wire  
23. Screws for securing the charging station  
24. Connector for the loop wire  
25. Low voltage cable  
26. Loop wire for boundary loop and guide wire  
27. Operator’s Manual and Quick Guide
1.3 Symbols on the product
These symbols can be found on the product. Study them carefully.

**WARNING:** Read the user instructions before operating the product.

**WARNING:** Operate the disabling device before working on or lifting the product.

The product can only start if the ON/OFF button is pressed and the indicator lamp is lit. Also, the correct PIN code must be entered. Before any inspections or maintenance is done, turn off the product and check that the indicator lamp on the ON/OFF button is not lit.

**WARNING:** Keep a safe distance from the product when operating. Keep your hands and feet away from the rotating blades.

**WARNING:** Do not ride on the product. Never put your hands or feet close to or under the product.

Do not use a high-pressure washer.

This product conforms to the applicable EC Directives.

Noise emission to surroundings. The product’s emissions are set out in Technical data on page 46 and on the rating plate.

1.4 Symbols on the display

The schedule function controls when the product cuts the lawn.

The settings function is where the general settings for the products are set.

The product will not cut the grass due to the schedule function.

The product overrides the schedule function.

The battery indicator shows the charge level of the battery. When the product charges the symbol flashes.

The product is put in the charging station but do not charge the battery.

The product is set in ECO-mode.

1.5 Symbols on the battery

Read the user instructions.
Do not discard the battery into fire and do not expose the battery to a heat source.

Do not immerse the battery into water.
1.6 Menu structure overview

1.7 Display
The display on the product shows information and settings of the product.

To access the display, push the STOP button.
1.8 Keypad

The keypad consists of 6 groups of buttons:

1. The indicator lamp on the keypad is an important status indicator. Refer to *The indicator lamp on page 26*.
2. The **ON/OFF** button is used to turn the product **ON/OFF**.
3. The **Settings** button is used to go to the main menu.
4. The **Home** button is used to choose the park modes: **Home & Stay** and **Home & Wait**.
5. The **Start** button is used to start the operation of the product. The **OK** button is used to confirm the chosen settings in the menus.
6. The **Back** button is used when moving back up in the menu lists.
7. The **OK** button is used to confirm the chosen settings in the menus.
8. The **arrow keys** are used to navigate in the menu. The **up/down arrow keys** are also used to enter digits, for example, PIN code, time and date.
9. The **Schedule** button is used to go to the schedule menu.
10. The **STAR** button is used to choose operating modes: **2nd area**, **Power Cut** and **Spot Cut**.
2 Safety

2.1 Safety definitions
Warnings, cautions and notes are used to point out specially important parts of the manual.

**WARNING:** Used if there is a risk of injury or death for the operator or bystanders if the instructions in the manual are not obeyed.

**CAUTION:** Used if there is a risk of damage to the product, other materials or the adjacent area if the instructions in the manual are not obeyed.

**Note:** Used to give more information that is necessary in a given situation.

2.2 General safety instructions
The following system is used in the Operator’s Manual to make it easier to use:

- Text written in *italics* is a text that is shown on the display of the product or is a reference to another section in the Operator’s Manual.
- Text written in **bold** is one of the buttons on the keypad of the product.
- Text written in **UPPERCASE** and *italics* refer to the different operating modes available in the product.
2.2.1 IMPORTANT. READ CAREFULLY BEFORE USE. KEEP FOR FUTURE REFERENCE

The operator is responsible for accidents or hazards occurring to other people or property.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities (that could affect a safe handling of the product), or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Local regulations may restrict the age of the operator. Cleaning and maintenance shall not be made by children without supervision.

Never connect the power supply to an outlet if the plug or cord is damaged. Worn or damaged cord increase the risk of electric shock.

Only charge the battery in the included charging station. Incorrect use may result in electric shock, overheating or leaking of corrosive liquid from the battery. In the event of leakage of electrolyte, flush with water/neutralizing agent. Seek medical help if it comes in contact with the eyes.

Use only original batteries recommended by the manufacturer. Product safety cannot be guaranteed with other than original batteries. Do not use non-rechargeable batteries.

The appliance must be disconnected from the supply mains when removing the battery.
**WARNING:** The product can be dangerous if used incorrectly.

**WARNING:** Do not use the product when persons, especially children, or animals, are in the work area.

**WARNING:** Keep your hands and feet away from the rotating blades. Never put your hands or feet close to or under the product when the motor is running.

### 2.3 Safety instructions for operation

#### 2.3.1 Use

- The product is designed to mow grass in open and level ground areas. It may only be used with the equipment recommended by the manufacturer. All other types of use are incorrect. The manufacturer’s instructions with regard to operation/maintenance must be followed precisely.
- Warning signs shall be placed around the work area of the product if it is used in public areas. The signs shall have the following text: **Warning! Automatic lawnmower! Keep away from the machine! Supervise children!**

- Use the operating mode *Park* or turn off the product when persons, especially children, or animals, are in the work area. It is recommended to program the product for use during hours when the area is free from activity, e.g. at night. Refer to *To set the schedule on page 21.* Consider that certain species, e.g. hedgehogs, are active at night. They can potentially be harmed by the product.
- The product may only be operated, maintained and repaired by persons that are fully conversant with its special characteristics and safety regulations. Please read the Operator’s Manual carefully and make sure you understand the instructions before using the product.
- It is not permitted to modify the original design of the product. All modifications are made at your own risk.
- Check that there are no stones, branches, tools, toys or other objects on the lawn that can damage the blades. Objects on the lawn can also lead to the product getting stuck. Help may be required to remove the object before the product can continue mowing. Always turn off the product using the *ON/OFF* button before clearing a blockage.
• Start the product according to the instructions. When the product is turned on, make sure to keep your hands and feet away from the rotating blades. Never put your hands and feet under the product.
• Never touch moving hazardous parts, such as the blade disc, before it has come to a complete stop.
• Never lift up the product or carry it around when it is turned on.
• Do not let persons who do not know how the product works and behaves use it.
• The product must never be allowed to collide with persons or other living creatures. If a person or other living creature comes in the product’s way it shall be stopped immediately. Refer to Stop on page 27.
• Do not put anything on top of the product or its charging station.
• Do not allow the product to be used with a defective guard, blade disc or body. Neither should it be used with defective blades, screws, nuts or cables. Never connect a damaged cable, or touch a damaged cable before it is disconnected from the supply.
• Do not use the product if the ON/OFF button does not work.
• Always switch off the product using the ON/OFF button when the product is not in use. The product can only start when the ON/OFF button has been turned on and the correct PIN code has been entered.
• MCCULLOCH does not guarantee full compatibility between the product and other types of wireless systems such as remote controls, radio transmitters, hearing loops, underground electric animal fencing or similar.

• Metal objects in the ground (for example reinforced concrete or anti-mole nets) can result in a stoppage. The metal objects can cause interference with the loop signal which then can lead to a stoppage.
• Operation and storage temperature is 0-50 °C / 32-122 °F. Temperature range for charging is 0-45 °C / 32-113 °F. Too high temperatures might cause damage to the product.

2.3.2 Battery safety

WARNING: Lithium-ion batteries can explode or cause fire if disassembled, short-circuited, exposed to water, fire, or high temperatures. Handle carefully, do not dismantle, open the battery or use any type of electrical/mechanical abuse. Avoid storage in direct sunlight.

For more information about the battery, refer to Battery on page 32

2.3.3 How to lift and move the product

To safely move from or within the work area:

1. Press the STOP button to stop the product. If security is set to high level (refer to To set the security level on page 22) the PIN code has to be entered. The PIN code contains four digits and is selected when you start the product for the first time. Refer to To do the basic settings on page 20.

2. Press the ON/OFF button and make sure the product is turned off. Check that the indicator lamp on the keypad is not lit. This means that the product is disabled. Refer to The indicator lamp on page 26.
3. Carry the product by the handle with the blade disc away from the body.

WARNING: The product must be turned off before lifting it. The product is disabled when the indicator lamp on the keypad is not lit.

CAUTION: Do not lift the product when it is parked in the charging station. It can damage the charging station and/or the product. Press STOP and pull the product out of the charging station before lifting it.

2.3.4 Maintenance

WARNING: The product must be turned off before any maintenance is done. The product is disabled when the indicator lamp on the keypad is not lit.

CAUTION: Never use a high-pressure washer to clean the product. Never use solvents for cleaning.

Inspect the product weekly and replace any damaged or worn parts. Refer to Maintenance on page 30.

2.3.5 In the event of a thunderstorm

To reduce the risk of damage to electrical components in the product and the charging station, we recommend that all connections to the charging station are disconnected (power supply, boundary wire and guide wire) if there is a risk of a thunderstorm.

1. Mark the wires to simplify reconnecting. The charging station’s connections are marked R, L and GUIDE.
2. Disconnect all connected wires and the power supply.
3. Connect all the wires and the power supply if there is no longer a risk of thunder. It is important that each wire is connected to the right place.
3 Installation

3.1 Introduction - Installation

WARNING: Read and understand the safety chapter before you install the product.

CAUTION: Only use original spare parts and installation material.

Note: Refer to www.mcculloch.com for more information about installation.

3.2 Before the installation of the wires

You can select to attach the wires with stakes or bury them. You can use the 2 procedures for the same work area.

• Bury the boundary wire or the guide wire if you are going to use a dethatcher on the work area. If not, attach the boundary wire or guide wire with stakes.
• Cut the grass before you install the product. Make sure that the grass is maximum 4 cm / 1.6 in.

Note: The first weeks after installation the perceived sound level when cutting the grass may be higher than expected. When the product has cut the grass for some time, the perceived sound level is much lower.

3.3 Before the installation of the product

• Make a blueprint of the work area and include all obstacles.
• Make a mark on the blueprint where to put the charging station, the boundary wire and the guide wire.
• Make a mark on the blueprint where the guide wire connects to the boundary wire. Refer to To install the guide wire on page 18.
• Fill in holes in the lawn.

Note: Holes with water in the lawn can cause damage to the product.

3.3.1 To examine where to put the charging station

• Keep a minimum 2 m / 6.6 ft. of free space in front of the charging station.
• Keep a minimum of 30 cm / 12 in. of free space to the right and left of the center of the charging station.
• Put the charging station near an outdoor power outlet.
• Put the charging station on a level surface.
3.3.2 To examine where to put the power supply

- Put the power supply in an area with a roof and protection from the sun and rain.
- Put the power supply in an area with good airflow.
- Use a residual-current device (RCD) when you connect the power supply to the power outlet.

**WARNING:** Do not change the power supply. Do not cut or extend the low-voltage cable. There is a risk of electrical shock.

Low-voltage cables of different lengths are available as accessories.

**CAUTION:** Make sure that the blades on the product do not cut the low-voltage cable.

3.3.3 To examine where to put the boundary wire

**CAUTION:** Do not put the low-voltage cable in a coil or below the charging station plate. The coil causes interference with the signal from the charging station.

**CAUTION:** If the work area is adjacent to water bodies, slopes, precipices or a public road, the boundary wire must have a protective wall. The wall must be minimum 15 cm / 6 in. in height.

- Put the boundary wire around all of the work area (A). Adapt the distance between the boundary wire and obstacles.
- Put the boundary wire 35 cm / 14 in. (B) from an obstacle that is more than 5 cm / 2 in. high.
- Put the boundary wire 30 cm / 12 in. (C) from an obstacle that is 1-5 cm / 0.4-2 in. high.
- Put the boundary wire 10 cm / 4 in. (D) from an obstacle that is less than 1 cm / 0.4 in.
If you have a paving stone path that is in level with the lawn, put the boundary wire below the paving stone.  

**Note:** If the paving stone is minimum 30 cm / 12 in. wide, use the factory setting for the Drive Past Wire function to cut all the grass adjacent to the paving stone.

**CAUTION:** Do not let the product operate on gravel.

If you make an island, put the boundary wire that runs to and from the island near together (E). Put the wires in the same stake.

Make an eyelet (F) where the guide wire is to be connected to the boundary wire.  

**CAUTION:** Do not make sharp bends when you install the boundary wire.

**CAUTION:** For careful operation without noise, isolate all obstacles such as trees, roots and stones.

### 3.3.3.1 To put the boundary wire in a slope

- For slopes steeper than 35% inside the work area, isolate the slope with boundary wire.
- For slopes steeper than 10% along the outer edge of the lawn, put the boundary wire 20 cm / 8 in. (A) from the edge.
- For slopes adjacent to a public road, put a fence or a protective wall along the outer edge of the slope.

### 3.3.3.2 Passages

A passage is a section that has boundary wire on each side and that connects 2 work areas. The passage must be a minimum of 60 cm / 24 in. wide.  

**Note:** If a passage is less than 2 m / 6.5 ft. wide, install a guide wire through the passage.

### 3.3.3.3 To make an island

- Put the boundary wire to and around the obstacle to make an island.
- Put the 2 sections of boundary wire that run to and from the obstacle together.
- Put the 2 sections of boundary wire in the same stake.

**CAUTION:** Do not put a section of boundary wire across the other. The sections of boundary wire must be parallel.

**CAUTION:** Do not put the guide wire across the boundary wire, for example a boundary wire that goes to an island.
3.3.3.4 To make a secondary area

Make a secondary area if the work area has 2 areas that are not connected with a passage.

- Put the boundary wire around the secondary area (B) to make an island. The work area with the charging station is the main area (A). Refer to To make an island on page 16.

Note: When the product cuts grass in the secondary area, the Secondary area mode must be selected. Refer to 2nd area on page 27.

3.3.4 To examine where to put the guide wire

- Put the guide wire in a line at a minimum of 1 m / 3.3 ft. in front of the charging station.
- Make sure that the guide wire has as much free area as possible to the left of the guide wire when facing the charging station. Refer to Guide calibration on page 20.
- Put the guide wire minimum 30 cm / 12 in. from the boundary wire.
- Do not make sharp bends when you install the guide wire.
- If the work area has a slope, put the guide wire diagonally across the slope.

3.3.5 Work area examples

- If the charging station is put in a small area (A), make sure that the distance to the boundary wire is at a minimum 2 m / 6.6 ft.
- If the work area has a passage (B), make sure that the distance to the boundary wire is at a minimum 2 m / 6.5 ft. If the passage is smaller than 2 m / 6.5 ft., install a guide wire through the passage. Minimum passage between the boundary wire is 60 cm / 24 in.
- If the work area has areas which are connected by small passages (C), you can change the settings in Lawn Coverage. Refer to To set the Lawn Coverage function on page 23.
- If the work area includes a secondary area (D), refer to To make a secondary area on page 17. Put the product in the secondary area and select Secondary area mode.
3.4 Installation of the product

3.4.1 To install the charging station

**WARNING:** Obey national regulations about electrical safety.

1. Read and understand the instructions about the charging station. Refer to *To examine where to put the charging station on page 14.*
2. Put the charging station in the selected area.
3. Connect the low-voltage cable to the charging station.
4. Put the power supply at a minimum height of 30 cm / 12 in.

![min 30 cm / 12”](image)

**WARNING:** Do not put the power supply at a height where there is a risk it can be put in water. Do not put the power supply on the ground.

5. Connect the power supply cable to a 100-240V outdoor power outlet.

**WARNING:** Applicable to USA/Canada. If power supply is installed outdoors: Risk of Electric Shock. Install only to a covered Class A GFCI receptacle (RCD) that has an enclosure that is weatherproof with the attachment plug cap inserted or removed.

6. Attach the low-voltage cable in the ground with stakes or bury the cable. Refer to *To put the wire into position with stakes on page 19* or *To bury the boundary wire or the guide wire on page 19.*

7. Connect the wires to the charging station. Refer to *To install the boundary wire on page 18* and *To install the guide wire on page 18.*

8. Attach the charging station to the ground with the supplied screws.

**CAUTION:** Do not make new holes in the charging station plate.

**CAUTION:** Do not put your feet on the charging station.

3.4.2 To install the boundary wire

1. Put the boundary wire around all of the work area. Start and complete the installation behind the charging station.

**CAUTION:** Do not put unwanted wire in a coil. The coil causes interference with the product.

2. Open the connector and put the boundary wire in the connector.

3. Close the connector with a pair of pliers.
4. Cut the boundary wire 1-2 cm / 0.4-0.8 in. above each connector.
5. Push the right connector onto the metal pin with the mark "R".
6. Push the left connector onto the metal pin with the mark "L".

3.4.3 To install the guide wire

1. Open the connector and put the wire in the connector.
2. Close the connector with a pair of pliers.
3. Cut the guide wire 1-2 cm / 0.4-0.8 in. above each connector.
4. Push the guide wire through the slot in the charging station plate.
5. Push the connector onto the metal pin with the mark "G".
6. Put the end of the guide wire at the eyelet on the boundary wire.

7. Cut the boundary wire with a pair of wire cutters.

8. Connect the guide wire to the boundary wire with a coupler.

   a) Put the 2 ends of the boundary wire and the end of the guide wire into the coupler.

   Note: Make sure that you can see the end of the guide wire through the transparent area of the coupler.

   b) Push the button on the coupler with an adjustable pliers.

   CAUTION: Twinned cables, or a screw terminal block that is insulated with insulation tape are not satisfactory splices. Soil moisture will cause the wire to oxidize and after a time result in a broken circuit.

9. Attach the guide wire to the ground. With stakes or bury the guide wire in the ground. Refer to To put the wire into position with stakes on page 19 or To bury the boundary wire or the guide wire on page 19.

3.5 To put the wire into position with stakes

- Put the boundary wire and the guide wire on the ground.
- Put the stakes at a minimum of 75 cm / 30 in. distance from each other.
- Attach the stakes to the ground with a hammer or a plastic mallet.

3.6 To bury the boundary wire or the guide wire

- Cut a groove in the ground with an edge cutter or a straight shovel.
- Put the boundary wire or the guide wire 1-20 cm / 0.4-8 in. into the ground.

3.7 To change the position of the boundary wire or the guide wire

1. If the boundary wire or the guide wire is put into position with stakes, remove the stakes from the ground.
2. Carefully remove the boundary wire or the guide wire from the ground.
3. Adjust the boundary wire or the guide wire into a new position.
4. Put the boundary wire or the guide wire into position. Refer to To put the wire into position with stakes on page 19 or To bury the boundary wire or the guide wire on page 19.

3.8 To extend the boundary wire or the guide wire

Note: Extend the boundary wire or the guide wire if it is too short for the work area. Use original spare parts, for example couplers.

1. Cut the boundary wire or the guide wire with a pair of wire cutters where it is necessary to install the extension.
2. Add wire where it is necessary to install the extension.
3. Put the boundary wire or the guide wire into position.
4. Put the wire ends into a coupler.
5. Push the button on the coupler with an adjustable pliers.

3.9 After the installation of the product

3.9.1 To do a visual check of the charging station
1. Make sure that the indicator LED lamp on the charging station has a green light.
2. If the indicator LED lamp does not have a green light, do a check of the installation. Refer to Indicator lamp in the charging station on page 40 and To install the charging station on page 18.

3.9.2 To do the basic settings
Before you start the product for the first time, you must do the basic settings and calibrate the product.
1. Push the ON/OFF button.
2. Push the arrow buttons and the OK button. Select language, country, date, time and set a PIN code.
   **Note:** It is not possible to use 0000 as PIN code.
3. Put the product in the charging station.
4. Push the START button and close the hatch.

3.9.3 Guide calibration
The calibration process sets as wide guide corridor as possible to reduce the risk of tracks forming on the lawn. Refer to To set the starting point on page 23.

**Note:** The product always runs to the left of the guide wire (as seen facing the charging station).

If the distance on the left side of the starting point is less than 0.6 m / 2 ft. the calibration process is interrupted. For the widest possible guide corridor, make sure that the distance from the starting point to the boundary wire is minimum 1.35 m / 4.5 ft. (perpendicular to the guide wire).

3.10 To do the product settings
The product has factory settings but the settings can be adapted to each work area.

3.10.1 To get access to the menu
1. Push the STOP button.
2. Use the up/down arrow buttons and the OK button to enter the PIN code.
3. Push the MENU button.

3.10.2 To do the schedule settings

3.10.2.1 Wizard
The wizard is a quick tool to find suitable schedule settings for your lawn.
1. Enter your estimated lawn size. It is not possible to enter a larger lawn size than the maximum work capacity.
2. Push the OK button to confirm the lawn size. By entering your lawn size the wizard suggests either a suitable daily schedule (go to step 4) or need input for inactive days.
3. Choose what day(s) the product should be inactive. Use the up/down arrow buttons to shift between days.
4. Push the **OK** button to confirm the chosen inactive day(s).

5. The wizard suggests a daily schedule for the active days. If you want to move the schedule interval to earlier or later in the day then push the **arrow buttons** up or down.

6. Push the **OK** button to confirm the daily schedule. An overview of the daily schedule is presented. Push the **OK** button to go back to main menu.

**Note:** To change the schedule settings for individual work days use the ***Schedule - Advanced*** menu.

### 3.10.2.2 To calculate the schedule setting

1. Calculate the dimension of your lawn in m² / yd².

2. Divide the m² / yd² of the lawn with the approximate operation capacity. Refer to table below.

3. The result is equal to the number of hours that the product must operate each day. The number of hours includes both operation and charging time.

**Note:** The operation capacity is approximate and schedule settings can be adjusted.

<table>
<thead>
<tr>
<th>Model</th>
<th>Approximate operation capacity, m² / yd² / h</th>
</tr>
</thead>
<tbody>
<tr>
<td>600 m²</td>
<td>42 / 50</td>
</tr>
<tr>
<td>500 m²</td>
<td>41 / 49</td>
</tr>
<tr>
<td>400 m²</td>
<td>40 / 48</td>
</tr>
</tbody>
</table>

Example: A lawn of 500 m² / 600 yd², cut with a product specified for 600 m².

500 m² / 42 ≈ 7 h.

600 yd² / 50 ≈ 7 h.

7. If the product must not cut grass on a specified day, unselect the box adjacent to the 2 time periods.

### 3.10.2.3 To set the schedule

1. Do steps 1–3 in *To get access to the menu on page 20.*

2. Use the **arrow buttons** and the **OK** button to move through the menu structure ***Schedule > Advanced > Overview***.

3. Use the **arrow buttons** and the **OK** button to select the day.

4. Use the left **arrow button** to select the period.

5. Push the **OK** button.

6. Enter the time with the **arrow buttons**. The product can cut the grass 1 or 2 periods each day.

### 3.10.2.4 To copy the schedule setting

1. Do steps 1–3 in *To get access to the menu on page 20.*

2. Use the **arrow buttons** and the **OK** button to move through the menu structure ***Schedule > Advanced > Overview > Copy***.

3. Use the **arrow buttons** and the **OK** button to copy the schedule setting. You can copy the schedule settings day to day or for the full week.

### 3.10.2.5 To reset the schedule setting

You can remove all schedule settings and use the factory setting.

1. Do steps 1–3 in *To get access to the menu on page 20.*

2. Use the **arrow buttons** and the **OK** button to move through the menu structure ***Schedule > Advanced > Overview > Reset***.
a) Push the arrow buttons to select Current day to only set the current day to factory settings.
b) Push the arrow buttons to select All week to reset all schedule settings to factory settings.

3. Push the OK button.

3.10.2.6 Day mode
The Day mode means that the product starts mowing at 08:00 / 8 am and mows the specified operation hours.

3.10.2.7 Night mode
The Night mode means that the product starts mowing at 20:00 / 8 pm and mows the specified operation hours.

3.10.3 Security level

There are 3 security levels for the product.

<table>
<thead>
<tr>
<th>Function</th>
<th>Low</th>
<th>Medium</th>
<th>High</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm</td>
<td></td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>PIN-code</td>
<td></td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>Time lock</td>
<td>X</td>
<td>X</td>
<td>X</td>
</tr>
</tbody>
</table>

- **Alarm** - An alarm goes off if the PIN-code is not entered within 10 seconds after the STOP button is pushed. The alarm also goes off when the product is lifted. The alarm stops when the PIN-code is entered.
- **PIN-code** - The correct PIN-code must be entered to get access to the Menu structure of the product. If the incorrect PIN-code is entered 5 times, the product is locked for a time. The lock is extended for each new incorrect try.
- **Time lock** - The product locks if the PIN-code has not been entered in 30 days. Enter the PIN-code to get access to the product.

3.10.3.1 To set the security level
Select 1 of 3 security levels for your product.
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Security > Security level.
3. Use the arrow buttons and the OK button to select the level of security.
4. Push the OK button.

3.10.3.2 To change the PIN-code
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Security > Advanced > Change PIN-code.
3. Enter the new PIN code.
4. Push the OK button.
5. Enter the new PIN code.
6. Push the OK button.
7. Make a note of the new PIN code. Refer to Introduction on page 3.

3.10.4 Lawn shield

The Lawn shield automatically adjust the cutting time to the growth of the grass. The product is not permitted to operate more than the schedule settings.

The first operation of the day is set by the schedule settings. Then the Lawn shield selects if the product will continue to operate.

Note: The Lawn shield is reset if the product stops to operate for more than 50 hours or if a Reset of all user setting is done. The Lawn shield is not changed if a Reset of schedule settings is done.

3.10.4.1 To set the Lawn shield
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Lawn shield > Use Lawn shield.
3. Push the OK button to select the Lawn shield.
4. Push the BACK button.
3.10.4.2 To set the Lawn shield frequency
Set how frequently the product must cut the grass when the Lawn shield is in use. There are 3 frequency levels: Low, Mid and High. The higher the frequency, the longer the product is allowed to work.

1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Lawn shield > Cutting time.
3. Use the arrow buttons to select Low, Mid or High frequency.
4. Push the BACK button.

3.10.5 Lawn Coverage
The Lawn Coverage function is used to guide the product to remote parts of the work area.

3.10.5.1 To set the Lawn Coverage function
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Installation > Lawn Coverage > Area 1.
3. Use the arrow buttons to select the % of the cutting time the product must cut the area. The % is equal to the % of the area in relation to the complete work area.
   a) Measure the area.
   b) Divide the area with the work area.
   c) Convert the result to %.
4. Push the BACK button.

3.10.5.2 To do a test of the Lawn Coverage function
1. Put the product in the charging station.
2. Do step 1-3 in To get access to the menu on page 20.
3. Use the arrow buttons and the OK button to move through the menu structure Settings > Installation > Lawn Coverage > Area 1 > More > Test.
4. Push the OK button.
5. Push the START button.
6. Close the hatch.
7. Make sure the product can find the area.

3.10.5.3 To disable or enable the Lawn Coverage function
Disable or enable the Lawn Coverage function for each area.

1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Installation > Lawn Coverage > Area 1 > Disable.
3. Push the OK button.
4. Push the BACK button.

3.10.5.4 To reset the Lawn Coverage settings
You can reset the Lawn Coverage settings for each area and use the factory setting.

1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Installation > Lawn Coverage > Area 1 > More > Reset.
3. Push the OK button.

3.10.6 To set the starting point
This function allows you to control how far the product drives along the guide wire from the charging station before it starts operating. The factory setting is 60 cm and the maximum distance is 300 cm.
**Note:** This is a useful function if the charging station is placed below a veranda or in another limited space area. Choosing a good starting point is important so that the guide calibration process is optimized.

1. Do steps 1-3 in *To get access to the menu on page 20*.
2. Use the **arrow button** and the **OK** button to move through the menu structure *Settings > Installation > Starting point*.
3. Use the **arrow buttons** to specify the distance in cm.
4. Push the **BACK** button.

### 3.10.7 To set the Drive Past Wire function

The front of the product always moves past the boundary wire by a specified distance before the product moves back into the work area. The factory setting is 30 cm. You can select a distance of 20-40 cm.

1. Do steps 1–3 in *To get access to the menu on page 20*.
2. Use the **arrow button** and the **OK** button to move through the menu structure *Settings > Installation > Drive Past Wire*.
3. Use the **arrow buttons** to set the distance in cm.
4. Push the **BACK** button.

### 3.10.8 ECO mode

**ECO mode** stops the signal in the boundary loop, the guide wire and the charging station, when the product is parked or is charging.

**Note:** Use **ECO mode** if the signal from the charging station causes interference with other wireless equipment, for example hearing loops or garage doors.

**Note:** Push the **STOP** button before you remove the product from the charging station. If not, the product can not be started in the work area.

### 3.10.8.1 To set the ECO mode

1. Do steps 1–3 in *To get access to the menu on page 20*.
2. Use the **arrow buttons** and the **OK** button to move through the menu structure *Settings > Installation > ECO mode*.
3. Push the **OK** button to select the **ECO mode**.
4. Push the **BACK** button.

### 3.10.9 To avoid collisions with the mower house

The wear on the product and the mower house decreases when you select *Avoid house collisions*.

1. Do steps 1–3 in *To get access to the menu on page 20*.
2. Use the **arrow buttons** and the **OK** button to move through the menu structure *Settings > Installation > Mower house > Avoid house collisions*.
3. Push the **BACK** button.

**Note:** If *Avoid house collisions* is selected it can result in grass that is not cut around the charging station.

### 3.10.10 Bluetooth®

The product can connect to mobile devices that have the McCULLOCH app installed. McCULLOCH is a free app for your mobile device. The short-range interaction with the product is called Bluetooth®. When pairing between the product and app has been confirmed, you have access to the menus and functions as long as you are within short-range (Bluetooth®).

#### 3.10.10.1 To install the McCULLOCH app

1. Download the McCULLOCH app on your mobile device.
2. Register in the McCULLOCH app.
3. Log in to your McCulloch account in the McCULLOCH app.

#### 3.10.10.2 To pair the McCULLOCH app and the product

1. Do steps 1–3 in *To get access to the menu on page 20*.
2. Use the **arrow buttons** and the **OK** button to move through the menu structure *Settings > Installation > Bluetooth > New pairing*. 

---

24 - Installation 985 - 004 - 22.01.2019
3. Select My mowers in the McCulloch app.
4. Select the plus sign (+).
5. Follow the instructions in the app.

### 3.10.11 General

In General you can change the general settings of the product.

#### 3.10.11.1 To set the time & date
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Time & Date.
3. Use the arrow buttons to set the time and then push the BACK button.
4. Use the arrow buttons to set the date and then push the BACK button.
5. Use the arrow buttons to set the time format and then push the BACK button.
6. Use the arrow buttons to set the date format and then push the BACK button.

#### 3.10.11.2 To set the language
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Language.
3. Use the arrow buttons to select language and then push the BACK button.

#### 3.10.11.3 To set the country
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Country.
3. Use the arrow buttons to select country and then push the BACK button.

#### 3.10.11.4 To reset all user settings
1. Do steps 1–3 in To get access to the menu on page 20.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Reset all user settings.
3. Use the right arrow button to select Proceed with reset of all user settings?

---

Note: Security level, PIN code, Loop signal, Messages, Date & Time, Language and Country settings are not reset.

#### 3.10.11.5 The About menu

The About menu displays information about the product, for example serial number and software versions.
4 Operation

4.1 The ON/OFF button

**WARNING:** Read the safety instructions carefully before you start the product.

**WARNING:** Keep your hands and feet away from the rotating blades. Never put your hands or feet close to or under the machine when the motor is running.

**WARNING:** Do not use the product when persons, especially children, or animals, are in the work area.

- Press the **ON/OFF** button to turn the product on. The product is active when the indicator lamp on the keypad is lit.
- Press the **ON/OFF** button to turn the product off.

**4.1.1 The indicator lamp**

The indicator lamp on the keypad is an important status indicator:

- The product is active if the indicator lamp lights continuously.
- The product is in standby if the indicator lamp flashes. This means that the operator must press the **ON/OFF** button to make the product active again.
- The product is disabled when the indicator lamp is not lit.

**WARNING:** It is only safe to carry out inspection or maintenance on the product when the product is disabled. The product is disabled when the lamp on the keypad is not lit.

4.2 To start the product

1. Open the hatch to the keypad.
2. Push the **ON/OFF** button. The display is lit up.
3. Use the up/down arrow buttons and the **OK** button to enter the PIN code.
4. Select the desired operating mode and confirm with the **OK** button. Refer to Operating modes on page 26.
5. Close the hatch.

**Note:** If the product is parked in the charging station, the product will only leave the charging station when the battery is fully charged and if the schedule allows the product to operate.

**4.3 Operating modes**

When the **STAR** button is pressed the following operating modes can be selected:

- Secondary area (2nd area)
- Power Cut
- Spot Cut
4.3.1 2nd area
To mow secondary areas the operating mode 2nd area must be chosen. Selecting 2nd area means that the product mows until the battery is empty.

If the product is charged in the 2nd area mode, it will fully charge, drive out about 50 cm and then stop. This indicates that the product is charged and ready to start mowing.

4.3.2 Power Cut
The schedule settings can be temporarily overridden by selecting Power Cut. It is possible to override the schedule for 3 h. It is not possible to override a standby period.

4.3.3 Spot Cut
Spot cut is useful for quickly mowing an area where the grass has been mown less than in other parts of the garden. You must manually move the product to the chosen area.

Spot cut means that the product mows in a spiral pattern in order to cut the grass in the area where it was started.

The Spot cut function is activated with the STAR button.

4.4 Park modes

4.4.1 Home & Stay
Park mode Home & Stay means that the product remains in the charging station until a different operating mode is selected.

4.4.2 Home & Wait
Park mode Home & Wait means that the product remains in the charging station until the next schedule or standby permits operation. Refer to Schedule and Standby on page 27.

4.5 Stop
1. Press the STOP button on top of the product.

The product stops and the blade motor stops.

4.6 Switch off
1. Press the STOP button.
2. Open the hatch.
3. Press the ON/OFF button for 3 seconds.

4.7 Schedule and Standby
The product has an inbuilt standby period according to the Standby time table. The standby period provides for instance a good opportunity to water or play games on the lawn.
<table>
<thead>
<tr>
<th>Model</th>
<th>Standby time, minimum hours per day</th>
</tr>
</thead>
<tbody>
<tr>
<td>600 m²</td>
<td>10</td>
</tr>
<tr>
<td>500 m²</td>
<td>12</td>
</tr>
<tr>
<td>400 m²</td>
<td>14</td>
</tr>
</tbody>
</table>

4.7.1 Example 1

This example is applicable to products with a specified work area of 500 m², but the principle is the same for the other models.

Schedule setting, Period 1: 08:00 - 22:00.
Active period (A): 08:00 - 20:00.

The schedule settings ensure that the product begins cutting the lawn at 08:00. However, the product is parked in standby mode in the charging station from 20:00 and rests until it starts cutting again at 08:00.

If the schedule setting is divided into 2 work periods, the standby period can be divided into a number of periods. The minimum standby period time must however be according to the Standby time table.

4.7.2 Example 2

This example is applicable to products with a specified work area of 500 m², but the principle is the same for the other models.

The schedule settings can be divided into 2 work periods to prevent mowing when there usually is other activities ongoing. If the schedule settings are divided into 2 work periods, the standby period is divided into several periods. The total standby period must however be according to the Standby time table.

Schedule setting Period 1 (A): 08:00 - 17:00.
Schedule setting Period 2 (C): 20:00 - 24:00.
Active period (A): 08:00 - 17:00
Active period (C): 20:00 - 23:00.

The product operates between 08:00 and 17:00. It starts again at 20:00 but stops at 23:00 due to standby mode until next start at 08:00.

Example: A specified work area of 500 m²

<table>
<thead>
<tr>
<th>Operation, A + C = max. hours</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>Charging/Standby, B + D = min. hours</td>
<td>12</td>
</tr>
</tbody>
</table>

4.8 To charge the battery

When the product is new or has been stored for a long period, the battery can be empty and needs to be charged before starting. In the normal mode, the product automatically alternates between mowing and charging.
WARNING: Only charge the product using a charging station which is intended for it. Incorrect use may result in electric shock, overheating or leakage of corrosive liquid from the battery.

In the event of leakage of electrolyte flush with water and seek medical help if it comes in contact with the eyes etc.

1. Press the ON/OFF button to start the product.
2. Place the product in the charging station. Slide the product in as far as possible to ensure proper contact between the product and the charging station. Refer to contact and charging strips in Product overview on page 4
3. The display shows a message that charging is in progress.

4.9 Adjust the cutting height
The cutting height can be varied from MIN (2 cm / 0.8 in.) to MAX (5 cm / 2 in.).

CAUTION: During the first weeks after a new installation, the cutting height must be set to MAX to avoid damaging the loop wire. After this, the cutting height can be lowered step by step every week until the desired cutting height has been reached.

4.9.1 To adjust the cutting height
1. Press the STOP button to stop the product.
2. Open the hatch.
3. Turn the knob to the required position.

• Turn clockwise to increase the cutting height.
• Turn counter-clockwise to decrease the cutting height.
4. Close the hatch.
5 Maintenance

5.1 Introduction - maintenance
For better operating reliability and longer service life: check and clean the product regularly and replace worn parts if necessary. All maintenance and servicing must be done according to McCulloch's instructions. Refer to Guarantee terms on page 49.

When the product is first used, the blade disc and blades should be inspected once a week. If the amount of wear during this period has been low, the inspection interval can be increased.

It is important that the blade disc rotates easily. The edges of the blades should not be damaged. The lifetime of the blades varies immensely and depends for instance on:

- Operating time and size of the work area.
- Type of grass and seasonal growth.
- Soil, sand and use of fertilizers.
- The presence of objects such as cones, windfalls, toys, tools, stones, roots and the like.

The normal life is 4 to 7 weeks when used under favorable conditions. Refer to To replace the blades on page 31 on how to replace the blades.

Note: Working with blunt blades gives a poorer mowing result. The grass is not cut cleanly and more energy is needed resulting in the product not mowing such a large area.

CAUTION: Never use a high-pressure washer to clean the product. Never use solvents for cleaning.

5.2 Clean the product
It is important to keep the product clean. A product with large amounts of grass stuck to it will not cope as well with slopes. It is recommended to clean using a brush.

McCulloch offers a special cleaning and maintenance kit as an accessory. Contact your McCulloch central service.

5.2.1 Chassis and blade disc
Inspect the blade disc and blades once a week.

1. Press the STOP button.
2. Press the ON/OFF button for 3 seconds to turn off the product.
3. Check that the indicator lamp on the keypad is not lit.
4. If the product is very dirty, clean it by using a dish brush or a garden hose. Do not use a high-pressure washer.
5. Lift the product onto its side.
6. Clean the blade disc and chassis using for example a dish brush. At the same time, check that the blade disc rotates freely in relation to the foot guard. Also, check that the blades are intact and can pivot freely.

WARNING: The product must be turned off before any maintenance is done. The product is disabled when the indicator lamp on the keypad is not lit.

WARNING: Wear protective gloves.

5.2.2 Wheels
Clean around the front wheels and rear wheel as well as the rear wheel bracket. Grass on the wheels can impact on how the product performs in slopes.

5.2.3 Cover
Use a damp, soft sponge or cloth to clean the cover. If the cover is very dirty it may be necessary to use a soap solution or washing-up liquid.
5.2.4 Charging station

Clean the charging station regularly from grass, leaves, twigs and other objects that may impede docking.

**WARNING:** Use the plug to disconnect the charging station before any maintenance, or cleaning of charging station or power supply.

5.3 Replace the blades

**WARNING:** Use blades and screws of the right type. McCulloch can only guarantee safety when using original blades. Only replacing the blades and reusing the screw can result in a screw wearing during mowing. The blades can then be propelled from under the body and cause serious injury.

Replace worn or damaged parts for safety reasons. Even if the blades are intact, they should be replaced on a regular basis for the best mowing result and low energy usage. All 3 blades and screws must be replaced at the same time to obtain a balanced cutting system. Use McCulloch original blades embossed with the crowned H-mark logotype, refer to *Guarantee terms on page 49.*

5.3.1 To replace the blades

1. Press the **STOP** button.
2. Open the hatch.
3. Press the **ON/OFF** button for 3 seconds to turn off the product.
4. Check that the indicator lamp on the keypad is not lit.
5. Turn the product upside down. Place the product on a soft and clean surface to avoid scratching the body and the hatch.
6. Remove the 3 screws. Use a straight slot or cross-tip screwdriver.
7. Remove each blade and screw.
8. Fasten new blades and screws.
9. Check that the blades can pivot freely.

5.4 Software update

If service is done by McCulloch customer service then available software updates are downloaded to the product by the service technician. However, owners of McCulloch products can update the software if this is initiated by McCulloch. Registered users are in that case notified.
5.5 Battery

**WARNING:** Only charge the product using a charging station which is intended for it. Incorrect use may result in electric shock, overheating or leakage of corrosive liquid from the battery. In the event of leakage of electrolyte flush with water and seek medical help if it comes in contact with the eyes etc.

**WARNING:** Use only original batteries recommended by the manufacturer. Product safety cannot be guaranteed with other batteries. Do not use non-rechargeable batteries.

**CAUTION:** The battery must be charged fully before winter storage. If the battery is not fully charged it can be damaged and in certain cases be rendered useless.

If the operating times for the product are shorter than normal between charges, this indicates that the battery is getting old and eventually needs replacing. The battery is fine as long as the product maintains a well-cut lawn.

**Note:** Battery life is dependent on the length of the season and how many hours a day the product is operating. A long season or many hours of use a day means that the battery must be replaced more regularly.

### 5.5.1 To replace the battery

**WARNING:** Use only original batteries recommended by the manufacturer. Product safety cannot be guaranteed with other batteries. Do not use non-rechargeable batteries. The appliance must be disconnected from the supply mains when removing the battery.

1. Press the ON/OFF button for 3 seconds to turn off the product. Check that the indicator lamp on the keypad is not lit.
2. Set the cutting height to MIN (2).
3. Turn the product upside down. Place the product on a soft and clean surface to avoid scratching the body and the display cover.
4. Clean around the battery cover.
5. Unscrew the screws to the battery cover (Torx 20) and remove the battery cover.
6. Release the latch of the connector and pull it upwards.
7. **CAUTION:** Do not pull the cables.
8. Release the latch of the battery holder and lift up the battery holder (including the battery) from the product. If the new battery is encapsulated in a hard plastic shell, go to number 10.
9. Place the new battery into the battery holder.

**Note:** The sticker “This side down” must be facing up when you place it into position. This means that “This side down” will be facing downwards when the product is standing on its wheels.
10. Place the battery holder (including the battery) or the new encapsulated battery into place in the product.

11. Connect the cable

12. Fit the battery cover without clamping the cables. If the seal on the battery cover is visibly damaged, the entire battery cover must be replaced.

13. Carefully cross-tighten the 4 screws for the battery cover (Torx 20).

5.6 Winter service

Take your product to your local McCulloch representative for service prior to winter storage. Regular winter service will maintain the product in good condition and create the best conditions for a new season without any disruptions.

Service usually includes the following:

- Thorough cleaning of the body, the chassis, the blade disc and all other moving parts.
- Testing of the product's function and components.
- Checking and, if required, replacing wear items such as blades and bearings.
- Testing the product's battery capacity as well as a recommendation to replace battery if necessary.
- If new software is available, the product is updated.
6 Troubleshooting

6.1 Introduction - troubleshooting

In this chapter, faults and symptoms are described and can guide you if the product does not operate as expected. More suggestions for steps to take in the event of malfunction or symptoms can be found on www.mcculloch.com.
6.2 Fault messages

Below a number of fault messages are listed which may be shown in the display of the product. Contact McCulloch customer service if the same message appears often.

<table>
<thead>
<tr>

### 6.4 Indicator lamp in the charging station

For a fully functional installation, the indicator lamp in the charging station must emit a solid or flashing green light. If something else appears, follow the troubleshooting guide below.

There is more help on www.mcculloch.com. If you still need help, please contact McCulloch customer service.

## 6.5 Symptoms

If your product does not work as expected, follow the symptoms guide below.

There is a FAQ (Frequently Asked Questions) on www.mcculloch.com which provides more detailed answers to a number of standard questions. Contact McCulloch customer service if you still cannot find the reason for the fault.

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The product has difficulty docking.</td>
<td>The guide wire is not laid in a long straight line that is far enough out from the charging station.</td>
<td>Check that the charging station has been installed according to the instructions in <em>To install the charging station on page 18</em>.</td>
</tr>
<tr>
<td></td>
<td>The guide wire is not inserted in the slot under the charging station.</td>
<td>It is absolutely critical for operation that the guide wire is perfectly straight and is in the correct position under the charging station. Therefore make sure that the guide wire is always in its slot in the charging station. Refer to <em>To install the guide wire on page 18</em>.</td>
</tr>
<tr>
<td></td>
<td>The charging station is on a slope.</td>
<td>Place the charging station on a surface that is entirely level. Refer to <em>To examine where to put the charging station on page 14</em>.</td>
</tr>
<tr>
<td>The product runs at the wrong time</td>
<td>The product clock needs to be set.</td>
<td>Set the clock. Refer to <em>To set the time &amp; date on page 25</em>.</td>
</tr>
<tr>
<td></td>
<td>The start and stop times for mowing are incorrect.</td>
<td>Reset the start time and stop time settings for mowing. Refer to <em>To reset the schedule setting on page 21</em>.</td>
</tr>
<tr>
<td>The product vibrates.</td>
<td>Damaged blades lead to imbalance in the cutting system.</td>
<td>Inspect the blades and screws and replace them if necessary. Refer to <em>To replace the blades on page 31</em>.</td>
</tr>
<tr>
<td></td>
<td>Too many blades in the same position lead to imbalance in the cutting system.</td>
<td>Check that only one blade is fitted at each screw.</td>
</tr>
<tr>
<td></td>
<td>Different versions (thickness) of McCulloch blades are used.</td>
<td>Check if the blades are of different versions.</td>
</tr>
<tr>
<td>The product runs, but the blade disc does not rotate.</td>
<td>The product searches for the charging station, or is driving to the starting point.</td>
<td>No action. The blade disc does not rotate when the product is searching for the charging station.</td>
</tr>
<tr>
<td>The product mows for shorter periods than usual between charges.</td>
<td>Grass or other foreign object blocks the blade disc.</td>
<td>Remove and clean the blade disc. Refer to <em>Clean the product on page 30</em>.</td>
</tr>
<tr>
<td></td>
<td>The battery is spent.</td>
<td>Replace the battery. Refer to <em>Battery on page 32</em>.</td>
</tr>
</tbody>
</table>
### Symptoms | Cause | Action
--- | --- | ---
Both the mowing and charging times are shorter than usual. | The battery is spent. | Replace the battery. Refer to *Battery on page 32.*

The product is parked for hours in the charging station. | The product has an inbuilt standby period according to the Standby time table. Refer to *Schedule and Standby on page 27.* | No action.

The STOP button has been activated. | | Open the hatch, enter the PIN code and confirm with the OK button. Press the Start button and then close the hatch.

Uneven mowing results. | The product works too few hours per day. | Increase the mowing time. Refer to *To calculate the schedule setting on page 21.*

The shape of the work area requires the use of Area 1-3 for the product to find its way to all remote areas. | Use Area 1-3 to steer the product to a remote area. Refer to *To set the Lawn Coverage function on page 23.*

The How often? setting is incorrect in relation to the layout of the work area. | Check that the correct How often? value is selected.

Work area too large. | Try limiting the work area or extending the work time. Refer to *To set the schedule on page 21.*

Dull blades. | Replace all the blades. Refer to *To replace the blades on page 31.*

Long grass in relation to the set cutting height. | Increase the cutting height and then successively lower it.

Accumulation of grass by the blade disc or around the motor shaft. | Check that the blade disc rotates freely and easily. If not, screw off the blade disc and remove grass and foreign objects. Refer to *Clean the product on page 30.*

### 6.6 Find breaks in the loop wire

Breaks in the loop wire are usually the result of unintentional physical damage to the wire such as when gardening with a shovel. In countries with ground frost, also sharp stones that move in the ground can damage the wire. Breaks can also occur due to the wire being stretched excessively during installation.

Mowing the grass too low right after the installation can damage wire insulation. Damage to the insulation may not cause disruptions until several weeks or months later. To avoid this, always select the maximum cutting height the first weeks after installation and then lower the height one step at a time every second week until the desired cutting height has been reached.

A defective splicing of the loop wire can also lead to disruptions several weeks after the splice was done. A faulty splice can, for example, be the result of the original coupler not being pressed together hard enough with a pair of pliers, or that a coupler of lower quality than the original coupler has been used. Please first check all known splices before further troubleshooting is done.
A wire break can be located by gradually halving the distance of the loop where the break may have occurred until there is only a very short section of the wire left.

The following method does not work if ECO mode is activated. Make sure first that ECO mode is turned off. Refer to ECO mode on page 24.

1. Check that the indicator lamp in the charging station flashes blue, which indicates a break in the boundary loop. Refer to Indicator lamp in the charging station on page 40.

2. Check that the boundary wire connections to the charging station are properly connected and not damaged. Check that the indicator lamp in the charging station is still flashing blue.

3. Switch the connections between the guide wire and the boundary wire in the charging station.

   Start by switching connection L and GUIDE.

   If the indicator lamp is lit with a solid green light, then the break is somewhere on the boundary wire between L and the point where the guide wire is connected to the boundary wire (thick black line).

To rectify the fault you will need boundary wire, connector(s) and coupler(s):

a) If the suspected boundary wire is short then it is easiest to exchange all of the boundary wire between L and the point where the guide wire is connected to the boundary wire (thick black line).

b) If the suspected boundary wire is long (thick black line) then do as follows: Put L and GUIDE back to their original positions. Then disconnect R. Connect a new loop wire to R. Connect the other end of this new loop wire at the middle of the suspected wire section.
If the indicator lamp now is green, then the break is somewhere in the wire between the disconnected end to the point where the new wire is connected (thick black line below). In that case, move the connection for the new wire closer to the disconnected end (roughly at the middle of the suspected wire section) and check again if the indicator lamp is green.

Continue until only a very short section of the wire remains which is the difference between a solid green light and a flashing blue light. Then follow instruction in step 5 below.

4. If indicator lamp still flashes blue in step 3 above: Put L and GUIDE back in their original positions. Then switch R and GUIDE. If indicator lamp now is lit with a solid green light then disconnect L and connect a new boundary wire to L. Connect the other end of this new wire at the middle of the suspected wire section. Follow the same approach as in 3a) and 3b) above.

5. When the break is found, the damaged section must be replaced with a new wire. Always use original couplers.
7 Transportation, storage and disposal

7.1 Transportation
The supplied Li-ion batteries obey the Dangerous Goods Legislation requirements.

- Obey all applicable national regulations.
- Obey the special requirement on package and labels for commercial transportations, including by third parties and forwarding agents.

7.2 Storage

- Fully charge the product. Refer to To charge the battery on page 28.
- Disconnect the product with the ON/OFF button. Refer to The ON/OFF button on page 26.
- Clean the product. Refer to Clean the product on page 30.
- Keep the product in a dry, frost free space.
- Keep the product with all wheels on level ground during storage, or use a McCulloch wall hanger.
- If you keep the charging station indoors, disconnect and remove the power supply and all the connectors from the charging station. Put the end of each connector wire in a container with grease.

**Note:** If you keep the charging station outdoors, do not disconnect the power supply and the connectors.

7.3 Disposal

- Obey the local recycling requirements and applicable regulations.
- For questions about how to remove the battery, refer to To replace the battery on page 32.

Husqvarna AB does not guarantee full compatibility between the product and other types of wireless systems such as remote controls, radio transmitters, hearing loops, underground electric animal fencing or similar.

The products are made in England or the Czech Republic. See information on the rating plate. Refer to *Introduction on page 3.*
9 Warranty

9.1 Guarantee terms

McCulloch guarantees this product’s functionality for a period of two years (from date of purchase). The guarantee covers serious faults relating to materials or manufacturing faults. Within the guarantee period, we will replace the product or repair it at no charge if the following terms are met:

• The product and the charging station may only be used in compliance with the instructions in this Operator’s Manual. This manufacturer's warranty does not affect warranty entitlements against the dealer/retailer.

• End-users or non-authorized third parties must not attempt to repair the product.

Examples of faults which are not included in the guarantee:

• Damage caused by water seepage from using a high-pressure washer, or from being submerged under water, for example when heavy rain forms pools of water.

• Damage caused by lightning.

• Damage caused by improper battery storage or battery handling.

• Damage caused by using a battery that is not a McCulloch original battery.

• Damage caused by not using McCulloch original spare parts and accessories, such as blades and installation material.

• Damage to the loop wire.

• Damage caused by non-authorized changing or tampering with the product or its power supply.

The blades and wheels are seen as disposable and are not covered by the guarantee.

If an error occurs with your McCulloch product, please contact McCulloch customer service for further instructions. Please have the receipt and the product’s serial number at hand when contacting McCulloch customer service.
10.1 EC Declaration of Conformity

Husqvarna AB, SE-561 82 Huskvarna, Sweden, tel: +46-36-146500, declares that the robotic lawn mowers ROB S400, ROB S500 and ROB S600 with serial numbers dating 2018 week 48 and onwards (the year and week is clearly stated on the rating plate, followed by the serial number), comply with the requirements of the COUNCIL’S DIRECTIVE:

- Directive “relating to machinery” 2006/42/EC.
  - Particular requirements for robotic battery powered electrical lawnmowers EN 50636-2-107: 2015
- Directive on “restriction of use of certain hazardous substances” 2011/65/EU.
  - The following standard is applied: EN 50581:2012
- Directive “relating to noise emissions from outdoor equipment” 2000/14/EC. Refer to Technical data on page 46 for information regarding noise emissions and the cutting width.

The notified body 0404, RISE SMP Svensk Maskinprovning AB, Box 7035, SE-750 07 Uppsala, Sweden, has issued a report regarding the assessment of conformity according to annex VI to the Council’s Directive of May 8, 2000 “relating to noise emissions into the environment” 2000/14/EC.

- Directive “relating to radio equipment” 2014/53/EU. The following standards have been applied:
  - ETSI EN 303 447 Draft V1.1.1
  - ETSI EN 300 328 v2.2.0
- Electromagnetic compatibility:
  - ETSI EN 301 489-1 Draft v2.2.0
  - ETSI EN 301 489-17 Draft v3.2.0

Lars Roos
Global R&D Director, Electric category
(Authorized representative for Husqvarna AB and responsible for technical documentation.)
